Task

You may use any programming language to complete the tasks below, but Python is preferred. Please read the notes on the last page.

Q1/Write a method that will remove any given character from a String?

Q2/Write a program to find all prime numbers up to a given range of numbers?

Q3/write a function that count how many the given character repeated in a given string?

NOTES:

1- Create an account on GitHub.

2- Create a Repository under the name (logic-task-pass) and it must be public.

3- Create a folder called (logic-pass) and put the solution in it then upload them to the Repository you created.

4- Copy the Repository link and place it in the form.

Good luck
